Office Action Summary	Application No. 10/763,798	Applicant(s) JOHNSON, JOSHUA WILLIAM	
	Examiner Gordon R. Baldwin	Art Unit 1775	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 March 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5 and 7-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5 and 7-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 7-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bowen (Pat. No. 206, 387), and further in view of Gutshall (Pat. No. 4,572,875).

Consider claim 1,3, 7, 16, 17, 18 Bowen teaches an artificial plant acting as an ornament with a stalk or trunk member along with the blooms of a flower or plant acting as the head member (Col. 1 Para. 2 and 3) being connected by a spirally curved wire (in the shape of a spring), and is considered to be a spring, due to Webster's dictionary definition defining "wire" as a metal in the form of a very flexible thread or slender rod. (Col. 3 Para. 17) The ability of the stalk and head member to return to their original configuration after moving is considered to be a known feature of a spring's nature, in that, the spring will return items connected to it to their original position. This action is due to the spring's ability to apply counteracting forces to position the items connected to the spring in a similar position to what they were prior to the movement being applied to the stalk/head members.

Bowen does teach the use of a tapering projection pin, to use to connect the stalk to the bloom (Col. 3 Para. 18), but the projection is not described as being

threaded. However, Gutshall does teach the use of a threaded screw. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the artificial plant in Bowen with the tapered threaded screw of Gutshall to provide a more secure attachment for the spring and flower bloom to the stalk section.

Consider claim 2, Bowen teaches the use of a spirally curved wire (in the shape of a spring) and it is considered to be elongated and it is connected to the head (or flower blossom section) and to the stalk. (Figure 1)

Consider claim 8, while Bowen's examples in figure (1) do not show a curved underside, the floral designs on F 2 and F3 are considered to have the ability to be contorted, so that they may form a head member that is curved and having an underside with an apex, because such a change in configuration is considered to be an obvious design choice. Additionally, the flower of F2 shows a connection that leads from where an apex on the underside would be formed and moving down toward the spring (flexible connection means) at fx2.

Consider claim 9, under Bowen, the head member of F2 is considered to taper down toward fx2 and f2, as it goes toward the connection part of fx2. (Fig. 1)

Consider claim 10, Bowen discloses the claimed invention except for a stalk member having a socket at the end of it. It would have been obvious to one having ordinary skill in the art at the time the invention was made to place the socket in the stalk rather than the socket in the base (as shown in figure 1), since it has been held that a mere reversal of essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167.

Consider claim 11, Bowen teaches in figure (1) that the stack gains width as it goes down toward the base to give a wider base.

Consider claim 12, Bowen teaches a spike being attached to the base of the stalk, which is then inserted into the socket of the base. (Fig. 1)

Consider claim 13, Bowen discloses the claimed invention except for the members being made of pottery. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use pottery to make the head member and stalk member, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious engineering choice. In re Leshin, 125 USPQ 416.

Consider claim 14, it would have been obvious to use a weather resistant material to prevent degradation upon exposure to elements.

Consider claim 15, In Bowen the flower head would be moveable in any direction.

Consider claim 19, Bowen teaches an artificial plant acting as an ornament with a stalk or trunk member along with the blooms of a flower or plant acting as the head member (Col. 1 Para. 2 and 3) being connected by a spirally curved wire (in the shape of a spring), and is considered to be a spring, due to Webster's dictionary definition defining "wire" as a metal in the form of a very flexible thread or slender rod. (Col. 3 Para. 17) The ability of the stalk and head member to return to their original configuration after moving is considered to be a known feature of a spring's nature, in that, the spring will return items connected to it to their original position. This action is

due to the spring's ability to apply counteracting forces to position the items connected to the spring in a similar position to what they were prior to the movement being applied to the stalk/head members.

Bowen does teach the use of a tapering projection pin, to use to connect the stalk to the bloom (Col. 3 Para. 18), but the projection is not described as being threaded. However, Gutshall does teach the use of a threaded screw. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the artificial plant in Bowen with the tapered threaded screw of Gutshall to provide a more secure attachment for the spring and flower bloom to the stalk section.

Additionally, while Bowen's examples in figure (1) do not show a curved underside, the floral designs on F 2 and F3 are considered to have the ability to be contorted, so that they may form a head member that is curved and having an underside with an apex, because such a change in configuration is considered to be an obvious design choice. Additionally, the flower of F2 shows a connection that leads from where an apex on the underside would be formed and moving down toward the spring (flexible connection means) at fx2.

Claim 4 and 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bowen (Pat. No. 206, 387), and further in view of Chance (Pat. No. 4,955,807)

Consider claim 4, Bowen is considered to teach the use of a spring, Bowen does not teach that the spring is to be made of stainless steel or a corrosion resistant metal. However, Chance teaches that the spiral coil (or spring) is to be made of metal

Art Unit: 1775

(Col. 2 lines 21-30). It would have been obvious to a person of ordinary skill in the art at the time of the invention for Bowen to use the metal spring of Chance, due to its strength and ability to hold up heavier decorations.

Additionally, the use of stainless steel, rubber or plastics is considered to be a known material. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use stainless steel or rubber or plastics, since it has been held to be within the general skill of a worker in the art to select known material on the basis of its suitability for the intended use as a matter of obvious engineering choice.

In re Leshin, 125 USPQ 416

Response to Arguments

Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gordon R. Baldwin whose telephone number is (571)272-5166. The examiner can normally be reached on M-F 7:45-5:15.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on 571-272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
